Abstract— Requirements analysis is a key activity in the development of a software system. It is a process of identifying, analyzing, and documenting the requirements of a system. This paper discusses the importance of requirements analysis in the development of a software system. It also discusses the challenges of requirements analysis and provides some guidelines for conducting requirements analysis. The paper is organized as follows. Section 2 discusses the importance of requirements analysis. Section 3 discusses the challenges of requirements analysis. Section 4 provides some guidelines for conducting requirements analysis. Section 5 concludes the paper.

Keywords— requirements analysis, software, FSWU, mobile learning application
