

IMSE TALK SERIES : 5G & Cybersecurity

5G & CYBERSECURITY

All Sarawak university/college students & lecturers are invited

DATE: 10 May 2022, Tuesday
TIME: 10:00AM - 11:00AM

Those who have studied history, or watched Hollywood movies, may remember that a famous couple, Paris and Helen of Ancient Greece, started the Trojan Wars. And 5G and Cyber security are the couple that started the latest round of tech wars. Is everything that was said by US, UK and European Union about 5G technical security true? Let us put the politics aside and examine the truth in the technology. And don't let the Trojan Horse slip past your sleeping guards!

We shall examine, in this 1 hour, why 5G is more secure and yet more vulnerable than previous versions of mobile technologies. Along the way, we will dispel some myths and open a few Pandora Boxes of cybersecurity.

SPEAKER: CHIA WAI KONG

Wai Kong is a Principal Consultant with DreamCatcher. He is also an Executive Education Fellow with the National University of Singapore and a 5G trainer at the NUS School of Continuing and Lifelong Education. He also provides consulting to Asian telecom operators on internationalisation, customer experience, 5G and smart cities.

Prior to 2018, Wai Kong was Senior Business Consultant at Huawei's Global Business and Network Consulting, and Chief Architect for HP Asia Pacific where he provided business use cases and justifications for various smart city, customer experience and industrial innovation projects.

In his spare time, Wai Kong enjoys sampling the cuisines of various countries and he likes to cook.
